

Oracle Database & Middleware Solutions

Serving Your End-to-End Database and Middleware Needs

From designing and architecting new database systems to optimizing/tuning/upgrading existing Oracle installations, BEAR Data can help your business seamlessly maintain and enhance your production systems. We work alongside our clients to provide reliable, scalable, high-performing database solutions & services.

As an Oracle Certified Partner, BEAR Data has achieved the highest level of certification possible by meeting and exceeding our client's needs.

Our Oracle database practice is specialized in:

- Database Design, Installation, Configuration & Advanced Tuning
- Data Warehouse Design, Development & Deployment
- Data Conversion from Alternate Databases
- Capacity Planning for Disk, CPU & Memory
- High Availability
- Real Application Clusters
- Advanced Replication
- Grid Control Implementation
- Upgrades

Our Oracle Fusion Middleware practice is specialized in:

- Application Server
- BPA Suite
- Business Integration
- Business Intelligence
- Collaboration Suite
- Data Hubs
- Data Integrator
- Developer Tools
- EDA Suite
- Identity Management
- Middleware For Small & Medium Businesses
- Oracle Fusion Middleware For Applications
- Portal
- Service Delivery Platform
- SOA Suite
- Webcenter Suite

Your Premier Source for Oracle Database and Middleware Solutions

One of the few Oracle "Certified Partners" on the West Coast, BEAR Data provides mission-critical Oracle solutions to businesses of any size and any industry.

We have a dedicated Oracle team that helps clients plan, design & implement database and middleware solutions that cut costs, boost productivity and increase competitiveness.

BEAR Data's Oracle Practice can help your business in many ways:

Database Architecture Design

For a self-contained business function-level application or an enterprise wide system, BEAR Data can ensure that the most critical planning phase is managed correctly. We assess your current infrastructure and design a solution that will achieve your business goals within your timeline and budget.

Database and Application Migrations

Through mergers or acquisitions a consolidation of multiple platforms is often needed. BEAR Data retains the skilled resources needed to properly architect a new comprehensive environment to bring databases together. We have a working knowledge of common source database and file systems and provide the tools needed to simplify the process.

Data Integration within Heterogeneous Environments

Through the use of proprietary tools we can simply access to non-Oracle databases transparently. The data appear as though it is coming from an Oracle data source. This solution can save your business time, resources and funds when your data must be accessible from alternate sources.

High Availability and Scalability

Oracle 10g Real Application Clusters (RAC) is a cost-effective technology to ensure maximum uptime for mission-critical systems, while also ensuring scalability for increasing future workloads. Let us show how an Oracle RAC solution can positively impact your business.

Performance Tuning

BEAR Data can tune your database solution to maximize response times, eliminate bottlenecks, increase scalability and reduce hardware and software costs. We can help your business achieve your scalability and performance goals.

Database Management

Once in production, BEAR Data can assist with the ongoing management of completed solutions. We can help with future architecture and design updates, upgrades, additional installations, enhancements, patches, monitoring, database rebuilding, backup/recovery, RAC expansion, replication, capacity planning and troubleshooting.
