

Unified Communications, Networking, Security & Wireless

Building Scalable, Mobile, High Performance Intelligent Networks

Today's IT infrastructures are continuing to evolve. Converged and wireless technologies are enabling greater capabilities and changing the way we do business. To keep pace, IT departments must implement exceedingly elaborate and secure network infrastructures to support these new technologies. As a result, a new paradigm has emerged:

- There is an increasing need and desire to improve and streamline corporate communications with Unified Communications.
- There is growing demand for wireless technology to deliver reliable, secure network connectivity to a mobile workforce.
- The upsurge in security threats and regulatory measures like Sarbanes-Oxley and VISA Compliance requires greater security within the network.
- New applications are requiring a higher performance "intelligent" network.

Transitioning to a scalable, mobile, high performance intelligent network is the only solution for communications-driven businesses.

BEAR Data can help your IT department and IT infrastructure evolve and keep pace.

Converged Networking

Integrate voice, video, and data traffic on a single network and simplify all forms of communications independent of location, time or device, while including business applications and mobility solutions.

Enterprise Networking

Design and implement Wide Area Networks, Metropolitan Area Networks and Campus Area Networks to ensure lightning fast communications and architectures.

Secure Networking

Deliver security services from internal/external vulnerability assessments, patch management and policy development to firewalls, intrusion detection and prevention systems.

Wireless Networking

Focus on LAN wireless systems and outdoor wireless mesh systems. Wireless technology from corporations to airports offers affordable, convenient and secure high-speed access.

Our Network Practice can assist your business in many ways:

Networking Solutions

- Advanced Networking
- Routing & Switching
- Network Security
- Unified Communications
- Virtual Private Networks
- Wireless & Mobility
- Content Delivery
- WAN Application Optimization
- Data Center Networking

Services & Support

- Planning & Design
- Network Integration
- Network Deployment
- Pre & Post Sales Support
- Bandwidth Optimization
- Support Contract Management
- Network Assessments

Your Premier Source for Cisco Solutions, Services & Support

As a Cisco Gold Partner, BEAR Data's core business is the delivery of networking services to mission-critical IT infrastructures. Our multi-disciplinary expertise, leading edge technologies and project management processes allow us to offer a full range of network services and solutions. We assist in the deployment and management of complex and diverse IT environments.

BEAR Data helps clients extract value from their legacy systems and maximize supplemental technology investments. Our solutions are designed to ensure that intelligence can be distributed throughout the enterprise, connecting employees, suppliers, business partners, users and systems, clients and information.

Specializations

Unified Communications

Unified Call Manager & Express
Unified Contact Center Express
Unified Meeting Place
Unified Video Conferencing
Unity, Unity Connection & Express

Cisco Data Center

Cisco Catalyst 6500, 4800, 4500, 3700, 3500 series switches
Cisco Catalyst 7600, 7200, 3800, 2800 series WAN routers
Cisco Catalyst ACE Module for 6XXX series
Cisco MDS 9500 series storage switches
FWSM, CSM, IDSM, WLSM, VPNSM, SSL-SM, WAAS

Cisco Security

CSA, ASA, CCA, CS-MARS, CSM, IDS/IPS, PIX

Cisco Wireless

Cisco 2000/4400 Wireless LAN Controllers
Cisco Aironet Indoor & Outdoor Access Points
Cisco Wireless ISR and Mobile Wireless Routers
Cisco Wireless IP Telephony
Site Survey for Wireless Network Deployment
